

Revolutionary size adjusting system by SINGING ROCK

BMI is abbreviation of Body Mass Index.

You can easily adjust free end of your waistbelt strap and fix it in the right position and minimize so called "sticking out" of padding incl. the first gear loop in the line.

Suitable for situation as losing or putting on your weight, putting more dresses or changing of your climbing seasons.

The best position is when buckle lies on padding and BMI system doesn't allow gear loops to get out.
